

Gentlemen, I ask that you vote to oppose implementation of BPL at this time. Power lines are antennas and do radiate RF energy. I am concerned that BPL will only increase our level of RF noise pollution and once in place, we will be without recourse to rectify the problems being created.

The frequency spectrum is a public resource that is shared by all and not the exclusive domain of a corporation or single market. To grant the authority to a corporation to deliver a product that radiates across roughly 80Mhz or so, does not seem in the public interest. I believe corporations have shown their true colors when it comes to the public trust with incidents like Enron, WorldCom, and so many others.

Again, I respectfully ask that BPL be denied.
